

WHAT TO LOOK OUT FOR WHEN SELECTING A POP UP SIZE

Pop Up Stand sizing can be a bit of a mystery for the uninitiated. Here's a few pointers:

Q. What does 3x3, 3x4 mean ?

A. These descriptions have nothing to do with assembled size. These descriptions refer to the number of squares (or "quads") that a pop up frame creates when fully extended. For example, look at this picture of a "3x3". You will see that the frame makes 3 squares high and three across - hence "3x3". But its physical dimensions are actually 2.2m high and 2.5m across!

Q. How do I select the right size for my stand space?

A. All the pop up stands on our site are labelled with their assemble height and width. All you need do is check this against your floorspace to make sure it will fit well. Failing that just give us a call and we'll talk you through the process!

3x1 curved
h.2225mm
w.1240mm
